Gynaecology

At Kings Park Hospital, we provide a dedicated gynaecology service focussed on the diagnosis and treatment of a range of gynaecological issues.

We are able to carry out diagnostic procedures in women with conditions including abnormal period bleeding, whilst our consultants can also provide hysteroscopy, endometrial biopsy, polyp removal, coil insertion and ablation procedures.

We also offer surgical procedures for benign gynaecological conditions including endometriosis, ovarian cysts, pelvic pain and heavy periods, and additional services like hormone replacement therapy (HRT).

Less waiting, more living. To find out more visit www.circlehealthgroup.co.uk/kingspark

Patients can be referred via SCI Gateway.

Cardiology

At Kings Park Hospital we are proud to offer patients a new direct access echocardiogram service in the form of either a standalone echocardiogram appointment, or as part of a one-stop clinic. Patients can be referred by their GPs or other consultants, or can self-refer directly for an echocardiogram. If a consultation is required, then a clinic appointment and an echocardiogram can be carried out in the one setting, where they are provided with a verbal report of the results at the time and a full report letter which is sent back to the referrer.

This service is suitable for patients who have symptoms of shortness of breath, leg swelling, chest pain, palpitations, blackouts or those who are suspected to have heart failure or valve disease. The echocardiogram service in Kings Park can also offer advanced echo techniques such as bubble studies and contrast echocardiogram if needed to reach a diagnosis.
